

PLATFORM SOLUTIONS

IND Mass Messaging Services

Description

IND Mass Messaging Services is a solution based on the IND SMSGateway product. The solution is capable of sending and receiving short text messages (SMS) using different interfaces like UCP (Universal Computer Protocol) or CIMD2 (Computer Interface to Message Distribution) connected to multiple SMS Centers.

“An easy to use solution for secure and reliable mass messaging”

Advantages

Using the Mass Messaging Services solution, the customer is able to send and receive SMS messages.

Advantages of the solution are:

- Ensured 24x7 operation - because of the product robustness
- Capability to send messages directly into GSM networks with the usage of an industrial modem
- The industrial modem provides a backup line for emergency situations
- Ready to use industrial modem connectors to any vendor
- Easy and fast integration to the already existing infrastructure
- Running on an independent, PC-level server
- Easy integration with IND Banking Front-Office related products

Main features

The Operational Monitoring solution has the following features:

- Robust, fail tolerant operation
- UCP, CIMD and industrial modem interfaces
- Cost-effective message sending with the use of multiple connectors
- Different platforms and databases are supported
- Industrial modem backup line in case IP connectivity fails
- SSM integration for monitoring purposes

IND SMSGateway

The Process

The basic concept of the solution is that the customer connects to the IND SMS Gateway with a so-called Adapter module. This adapter specifies how the outgoing messages from the customer's back-end systems should be read and how the incoming messages to the customer's back-end systems should be written.

On the other side, the IND SMS Gateway connects to multiple SMS Centres using various communication interfaces. That is, it connects to the mass messaging service providers via Connectors.

The SMS Gateway is also able to use a standard industrial modem that acts as an emergency channel in case of fatal communication problems.

About IND Group

IND Group, with its unique philosophy for "The Banking Front-Office Technology" is a leading developer and provider of banking front-office products on the European e-finance market. As we enter our second decade in operation we are witnessing a radical revolution in the global economy. The implications of the economic slowdown are widespread for banks: new business models, a changing competitive landscape and customer demand mean that adjusting business to new expectations has never been so important. As our professional and business success is secured by our ability to adapt to the ever changing world of the e-finance market, we can help our banking clients to accelerate these unavoidable changes in their frontline operations.

The remarkable growth IND has made over the past years marks a true success story in the International financial IT market. We provide proficiency and state-of-the-art technology in more than 15 countries on three continents. With a foundation of profitable growth since its inception in 1997, IND Group is operating now from several countries: Austria, Germany Hungary and UK. Through our local business partner network we are represented in Dubai, Egypt, Italy, Spain and Switzerland.
